

Huda Mohammed AL Zahrani

Technical Support Specialist | Product & Systems Thinking | Decision Logic Design

Jeddah, Saudi Arabia | +966-55-761-8807 | Hudaalzharani31@gmail.com | linkedin.com/in/huda-alzharani-53404a235

SUMMARY

Systems-oriented Technical Support Specialist with hands-on experience in digital Hajj & Umrah service operations and full-stack operational system design. Skilled in translating operational pain points into structured workflows, decision logic, and scalable support systems. Built "Call Helper," an AI-assisted operational decision system focused on ambiguity handling, contextual routing, and guided troubleshooting workflows. Interested in Product, TPM, Operations Systems, and AI-assisted workflow design roles.

PROFESSIONAL EXPERIENCE

Technical Support Specialist – Call Center (Hajj & Umrah Services)

2024 – Present

ELM – Information Center of Hajj and Umrah

Jeddah, Saudi Arabia

Operate within a live digital service environment. Apply structured troubleshooting logic to diagnose, classify, and resolve technical and operational cases in real time.

Systems & Logic Work

- Identified recurring issue patterns causing classification errors during live calls
- Designed structured decision logic to standardize troubleshooting across the support team
- Organized complex support scenarios into reusable diagnostic path structures
- Improved escalation logic clarity to reduce incorrect case routing

Operational Responsibilities

- Triage and process user issues across registration, activation, qualification, and service status
- Distinguish between technical errors and procedural requirements to route cases correctly
- Guide users through correct verification workflows before escalation

Collaborative Training

90 Hours

Language World House and Publishing

PROJECT EXPERIENCE

Call Helper – AI-Assisted Operational Decision System

2025 – Present

Independent Project

Designed and developed a full-stack operational decision-support system for technical support environments, focused on improving issue classification, reducing ambiguity, and guiding agents through structured workflows during live service calls.

Key Contributions

- Designed multi-layer decision logic combining category filtering, confidence scoring, keyword analysis, and ambiguity handling
- Built contextual workflow routing that adapts based on issue type, user type, and confidence level
- Developed Grey Area logic for unclear scenarios using guided verification and re-evaluation flows
- Implemented recurring issue tracking, archive states, and operational monitoring behavior
- Built knowledge management and operational update pages to support internal learning and visibility
- Integrated pre-built NLP tools to support lightweight issue interpretation and matching behavior

Tools & Technologies: React.js · Node.js · MongoDB · GitHub · NLP Integration · Figma · Miro · Excel

EDUCATION

Bachelor's Degree in French Language and Translation

2023

King Abdulaziz University

Jeddah, Saudi Arabia

- Completed Cybersecurity course (additional qualification)

French Language – B2 Level

Alliance Française Institute

TECHNICAL SKILLS

Tools & Technologies: Python · Figma · Miro · Jira · Excel

Core Strengths: Decision Framework Design · Modular Workflow Architecture · Pattern Recognition · Issue Classification · Systems Thinking
